

Subversion vs. Git

Checking out a subdirectory

SVN

```
svn co ${URL}/sub/directory (name)
```

GIT

```
mkdir <repo> && cd <repo>
git init
git remote add -f <name> <url>
git config core.sparsecheckout \
    true
echo some/dir/ >> .git/info/sparse-checkout
echo another/sub/tree >> \
    .git/info/sparse-checkout
git pull <remote> <branch>
```
